# CHECKLIST OF THE BIRDS OF BONI - DODORI

## **The Boni-Dodori Forest System**

The Boni-Dodori forest system is in the easternmost corner of Kenya, bordering Somalia and the Indian Ocean. It comprises Boni and Dodori National Reserves, Boni-Lungi and Boni-Ijara forests (which at the time of publication were understood to have recently been gazetted as Forest Reserves) and the Aweer Community Conservancy, proposed by the indigenous Aweer (Boni) people and the Northern Rangelands Trust. The Boni-Dodori area was designated Kenya's 63<sup>rd</sup> Important Bird and Biodiversity Area (IBA) by Nature Kenya and BirdLife International in 2014. It forms part of the East African coastal forests biodiversity hotspot, an area known for globally significant levels of species richness and one of Africa's centers of endemism.

At the time of going to press, the area was under the control of the Kenya Defence Forces with restricted movement of the public. It is hoped that security will soon be restored and this remarkable landscape will be open to visitors again.

This Checklist will be the first guide for visitors.

## **The Landscape**

The Boni-Dodori forest system is a vast mosaic of east African coastal forest and thicket, seasonally flooded grassland and palm savanna, scattered wetlands and a strip of Acacia woodland.

The graceful, branched Doum palms (*Hyphaene compressa*) form thick stands in places, or are scattered in grassland. Forest trees include the mighty Mbambakofi (*Azelia quanzensis*), Tamarind (*Tamarindus indica*), *Croton megalocarpoides*, *Asteranthe asterias*, *Manilkara* and *Acacia spp.* On the red soils of Sankuri Ridge on the way to Kiunga are *Ochna* shrubs with yellow blossoms and *Fernandoa magnifica* trees with large red flowers. Further towards the coast the road is bordered by Acacia woodland and coastal scrub.

Along the Dodori River there is a narrow belt of riparian forest, pools covered with Nile cabbage that host many waterbirds, and clumps of *Combretum constrictum* bushes whose red flowers attract sunbirds.

Dodori National Reserve in Lamu County features grassland with palms, with patches of forest and thicket. Boni National Reserve in Garissa County is an extensive forest of scattered tall trees and dense understory, bordered by Acacia woodland in the southeast. A rough road traverses the area between the two reserves, from Hindi off the Malindi-Lamu highway to Kiunga near the Kenya-Somalia border, lined with a few villages and associated farmlands.

This diverse and isolated landscape shelters many mammal species, including African wild dog, African lion, leopard, African buffalo, topi, Haggard's oribi, the Critically Endangered Aders' duiker (*Cephalophus adersi*) and a giant sengi (or giant elephant-shrew – sub-family *Rhynchocyoninae*) that may be new to science.

## The People

This is the land of the Aweer (often referred to as Boni) people. In the past, they lived inside the forest and relied on forest resources for their livelihoods. Currently, they are settled in villages and practice subsistence agriculture. The area also hosts other communities, such as Bajuni and Kikuyu as well as pastoralists from the northern region of Kenya.

## The Birds

This bird checklist represents 276 bird species from 66 families, from only a small section of the Boni-Dodori Forest System.

The bird not seen elsewhere in Kenya is the Juba race of the Red-headed Weaver. This gorgeous bird, featured on the cover, often builds its nest in tall trees in villages.

The Boni-Dodori forest system shelters half of the bird species of the East African Coastal Forest Biome. These are: Southern Banded Snake Eagle, Fischer's Turaco, Mangrove Kingfisher, Mombasa Woodpecker, Chestnut-fronted Helmetshrike, Gorgeous (Four-coloured) Bushshrike, Little Yellow Flycatcher, Northern Brownbul, Fischer's Greenbul, Tiny Greenbul, Scaly Babbler, Black-bellied Starling, Plain-backed Sunbird, Mouse-coloured Sunbird, Violet-breasted Sunbird and Malindi Pipit.

The river pools contain a rich variety of waterbirds, including African Finfoot. The Acacia woodland and nearby thickets are the home of the *kismayensis* sub-species of the Red-naped Bushshrike - which in fact does not have a red crown, or any noticeable red at all.

From April to November, migratory birds from the South, including Yellowbill and Red-capped Robin Chat, are much in evidence. In March and April, large numbers of migrants from the North pass through on their way to Europe and Asia. Long lines of Amur Falcons and Eurasian Rollers may be seen flying north, and Common Cuckoo, Eurasian Golden Oriole, Common Nightingale and warblers may land anywhere after a shower.

Five species were listed as threatened in the IUCN Red List in 2015: White-headed Vulture (Critically Endangered), Lappet-faced Vulture and Basra Reed Warbler (Endangered), Somali Ostrich and Martial Eagle (Vulnerable). Seven other species were listed as Near Threatened: Southern Banded Snake Eagle, Bateleur, Pallid Harrier, Crowned Eagle, Curlew Sandpiper, Fischer's Turaco and Plain-backed Sunbird.

## Conservation Issues

This bird checklist and the mammal surveys (see references below) reveal the extremely high conservation value of the region. Its protection is all the more urgent given the myriad of immediate and imminent threats including illegal logging for sawn wood, pole cutting, slashing and burning for agriculture, infrastructure development and land rush for estate development due to the Lamu Port South Sudan Ethiopia Transport corridor (LAPSSET) project as well as onshore and offshore oil and wind energy exploration and security initiatives.

This checklist was prepared by Fleur Ng'weno, John Musina and Rajan Amin.

**Notes:**

# Map of the Boni - Dodori IBA

To record birds of the undergrowth, the 2014 survey used ringing. Birds were trapped using mist nets, safely extracted from the nets, fitted with a light aluminium ring, measured, photographed, and released. Done with care, ringing does not harm the birds.
